Experience - 4 years

Fullstack Engineer

June 2024 – Present

Savelivez

 $Remote \cdot Brazil$

- Led the architecture and development of a custom software solution for hospitals, overseeing the entire lifecycle of the frontend, backend, and partial DevOps processes.
- Designed and implemented a fully bespoke UI/UX for data visualization, enabling hospitals to make critical decisions with ease.
- Engineered robust backend systems for managing complex hospital data, ensuring seamless integration with the custom frontend.
- Managed a team of three, taking primary responsibility for architectural design and most of the code development, which delivered a high-performance, scalable, and user-centric software solution tailored to healthcare needs.
- Ensured data accuracy and responsiveness by optimizing backend-to-frontend workflows, from table management to dynamic visualizations.

Market Research Analyst & Software Engineer

Sep. 2021 – May 2024

 $Cryptech\ Enterprises$

 $Remote \cdot Brazil$

- Conducted market research and analysis to inform data driven investment decisions in the cryptocurrency sector.
- Developed a full-stack web application using NextJS, MySQL and Docker to analyze multiple token data and interact with wallets
- Developed and automated trading strategies to optimize investment portfolios.
- Managed operational trading activities, ensuring timely response to market conditions.
- Identified and acted upon investment opportunities in cryptocurrency "IPO's", substantially increasing portfolio value.

Full Stack Engineer - Freelance

May. 2021 – May. 2024

Various Clients

 $Remote \cdot Brazil$

EDUCATION

Universidade Tecnológica Federal do Paraná

Toledo, PR

Bachelor of Computer engineering (7/10 semesters) Aug. 2017 - March 2020, March 2021 - September 2021 (PAUSED)

Harvard University

Remote

CS50x: CS50's Introduction to Computer Science

Sep. 2023 - Dec 2023

Personal Projects

Retire-Me | Python, Flask, React, NextJS, MySQL, Docker Video

Dec 2023 – Present

- Built a fullstack web application with Next.js, Node.js, and Python, integrating secure user authentication, real-time portfolio management, retirement and financing calculators, and an advanced portfolio rebalancer.
- Developed features to manage and display stocks in real-time using Yahoo Finance data, including CRUD operations for portfolio stocks.
- Implemented retirement and financing calculators to help users plan future financial needs and understand various loan scenarios.
- Utilized Next.js, React, Node.js, Python with Flask, and Docker for a robust, secure, and scalable application. Emphasized data security with bcrypt for password hashing and optimized performance using Prisma ORM and MariaDB in a Docker environment.

TECHNICAL SKILLS

Languages: TypeScript, C/C++, Python, SQL, HTML/CSS

Frameworks: NextJS, React, Node.js, Flask, QT DevOps: AWS, Git, Docker, Serverless, Supabase
